Paul,
Thanks for the offer of help. I'll discuss it with Chuck.

Julie. It would not be much effort to run GC-MS on 100 powders in CT/ month or every other month if DL chemist does the prep of weighing./ crystals /spots and vialing (sic) them. John did drug metabolites as cocaine metabolites in urine and I have done thousands of powders for drugs and testified- so not a court issue. . It could slightly ease the Drug lab burden without taking away from our primary duties.ala autosampler. This exercise keeps us adept at drug analysis as in a food tampering. A powder as common cocaine- or heroin is really not much to fret about except carryover. It ties into CT because a powder threat could be real by sprinkling in food or dissolving first. We have 2 available GCMS's for this/ and or food. Chuck/you can decide what types to submit. . April looks like a free month.

Hi there,

It wouldn't be a problem except that Chuck is at a MOSES meeting today. Tomorrow we are planning on heading out to Worcester for the big 100 sample transfer.

Thanks,

Betsy
